To clean and disinfect the lenses, wash with water or eyewear cleaning spray and blot dry with a microfiber cloth. To clean and disinfect the frame and strap, remove the lens and hand wash the frame in a mild soapy solution, rinse and air-dry.

INSTRUCTIONS

READ ALL INSTRUCTIONS BEFORE USING THIS EYEWEAR. FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN SERIOUS PERSONAL INJURY OR DEATH.

- Do not use this eyewear until a snug and secure fit has been obtained. Assume that this eyewear fits securely at all times.
- Do not make any modifications to this eyewear.
- Do not use this eyewear for protection against laser light unless using laser specialty lenses. Laser light can cause permanent damage to your eyes even if you are wearing this eyewear.
- Do not use spectacles for chemical splash or chemical vapor exposure protection.
- Do not use ammonia, alkaline cleaners, and abrasive cleaning compounds or solvents when cleaning eyewear lenses. Use of certain solvents may lower the impact resistance of the eyewear.
- Exposure to or contact with chemical vapors or liquids may cause surface cracks or other damage.
- Materials that may come into contact with the wearer's skin could cause allergic reactions to susceptible individuals.
- Examine this eyewear frequently and replace it immediately if there is any sign of scratches (lenses) or damage.
- Eye protection (such as this) against high speed particles worn over standard ophthalmic spectacles may transmit impacts, creating a hazard to the wearer.
- If protection against high-speed particles at extremes of temperature (EN 166:2001 Section 7.3.4) is required then the selected eye-protector should be marked with the letter T immediately after the impact letter, i.e. FT, BT or AT. If the impact letter is not followed by the letter T then the eye protector shall only be used against high speed particles at room temperature.
- Do not use this eyewear in an industrial setting without first referring to ANSI Z87.1 (in the United States) or EN 166 (in Europe), your supervisor, or a safety specialist to insure that you are wearing proper protection. Some operations may require machine guards, goggles, face shields, special filter lenses or other safety equipment.
- Protective devices do not provide unlimited protection. Eye and face protective devices are not substitutes for machine guards and other engineering controls. Personal eye and face protective devices alone should not be relied on to provide complete protection against hazards, but should be used in conjunction with the machine guards, engineering controls, and sound manufacturing and personal safety practices.
- This eyewear is not designed to protect the wearer from all injury in the event of an impact with a hard object or if the lens is not properly secured in the frame.
- Revision does not recommend the following uses of tinted lenses: Night time driving or direct viewing of the sun or other artificial light source. Solar lenses are not recommended for industrial protection such as welding, brazing, or cutting operations. Vermillion lenses are not suitable for driving.
- Since the ShadowStrike frame bears two impact level markings (FT/S), the marking on the ocular will identify which impact level shall be assigned to the complete eye-protector.
- Tinted lenses, such as the high-contrast yellow lenses, are typically designed for use for specific visual tasks. Use care in selecting and using tinted lenses where color recognition is important as some tinted lenses can alter color perception.
- Automotive windshields block ultraviolet light preventing photochromic lenses from darkening sufficiently to block sun glare.
